**Leverage circularity in Discrete Manufacturing for Decarbonization of Production and Sustainable Products**

- Manufacturing by definition is a carbon intensive and resource hungry process. However, it is possible to build more sustainable products by adopting the principles of circular economy
- As virgin materials get more scarce and thereby expensive, material stewardship and reuse across higher value retention loops like remanufacturing and refurbishment becomes a handy tool to drive up profitability in the upstream supply chain
- Harvesting parts for reuse also helps in decarbonization. When parts are harvested at end of use, upstream scope 3 emissions can be greatly reduced for each participant of the value chain
